PROFILE

Business Intelligence and Data Analytics graduate with practical experience in software development, systems analysis, database management, data engineering and analytics. Proficient in Python, SQL, PostgreSQL, Oracle SQL, HTML, CSS and Power BI, with experience developing web-based applications, integrating databases, building data processing workflows and producing analytical reports and dashboards. Skilled in data collection, cleaning, transformation, validation and management, with an understanding of application development, relational and NoSQL databases, ETL processes and data quality practices. Experienced in applying technical and analytical skills within academic projects and a financial services environment. Passionate about developing practical technology solutions, maintaining reliable information systems and transforming research and operational data into meaningful insights. Eager to contribute to software engineering, systems development and research data management initiatives while further developing professional technical expertise.

EDUCATION

Bachelor of Science (Hons) in Business Intelligence and Data Analytics Aug 2022 - May 2026

Botswana Accountancy College, Gaborone

- Designed and developed software applications using Python, JavaScript, HTML, CSS and SQL, incorporating backend functionality, database integration, user authentication, reporting modules and responsive interfaces.
- Designed, implemented and queried relational databases, developing database structures, relationships and SQL queries to support efficient data storage, retrieval and management.
- Applied data collection, extraction, cleaning, transformation and validation techniques to prepare reliable datasets for analysis, reporting and decision-making.
- Developed and implemented ETL processes and data management solutions, applying data warehousing concepts and database management principles to improve data consistency and accessibility.
- Worked with MongoDB to design and manage NoSQL databases, implementing document-based data models to support structured information storage and retrieval.
- Used Python and R programming to automate data processing, perform exploratory analysis, conduct feature engineering and develop predictive models using machine learning techniques.
- Applied classification, regression and clustering techniques to develop analytical solutions and extract meaningful insights from complex datasets.
- Developed interactive dashboards and reporting solutions using Power BI, Grafana, Excel, Python and SQL to communicate trends, performance indicators and analytical findings.
- Conducted systems and business process analysis to understand requirements, evaluate technical needs and translate problems into practical technology and data solutions.

EMPLOYMENT

Data & Digital Attache Jan 2025 - Sep 2025

Letshego Africa Holdings Limited, Gaborone

- Supported data extraction, transformation and analysis through ETL processes, preparing datasets for operational reporting, performance monitoring and business decision-making.
- Queried and managed large relational databases using PostgreSQL (DBeaver) and Oracle SQL Developer across multiple business units, supporting accurate data retrieval, validation and integrity.
- Developed interactive dashboards and data visualisations using Power BI, Excel and Grafana to monitor key performance indicators and provide operational and management reporting.
- Applied database management and data validation to investigate data discrepancies, improve reporting accuracy and maintain reliable analytical outputs.
- Developed a responsive, developer-facing web application interface using Python, JavaScript, HTML, CSS and PostgreSQL, implementing frontend and backend functionality, database integration and user-focused design based on provided UX/UI requirements.
- Collaborated with data analysts, database administrators and developers to understand data requirements, investigate technical issues and support reporting and system-related activities.
- Documented analytical processes and reporting requirements while supporting the delivery and maintenance of business intelligence solutions within a financial services environment.

SKILLS

Data Visualization

Microsoft Power BI

R Programming

Dashboard Development

Python Programming

Machine learning

SQL

Microsoft Excel

Data Preprocessing

Workflow Automation

Data Analysis

Analytical Thinking and Problem-Solving

Business Intelligence Reporting

Relational Database Management

Web Development

Data Management

NoSQL Database Management

Systems Analysis and Requirements Gathering

LANGUAGES

English

Setswana

HOBBIES

- Play Softball
- Watch Football
